The precedence property is used to model split and disputed lineages. The sequence property is used to easily return an ordered list. The ordinal property represents how the incarnation is referred to in the system adopted by ToL. Sequence and ordinal are the same except in split lineages and unnumbered lineage originators; sequence is not shown in the following diagrams where it is the same as the ordinal.

Different traditions claim a different 7th incarnation, and the lines will continue to diverge from this point. Differs from a split lineage. This case will become increasingly common as Chinese and Indian traditions split after the death of current incarnations such as the 14th Dalai Lama. It may eventually result in splitting the lineage into two child lineages.

Unnumbered Lineage Originator

Incarnation 96_8181 (sequence: 1) — providesOrderFor → Chokgyur Lingpa ← providesOrderFor — Incarnation 95_8181 (sequence: 1)

Incarnation 96_8181 — isFirstMemberOf → Tsike Chokling Lineage

Incarnation 95_8181 — isFirstMemberOf → Neten Chokling Lineage

First incarnation is unnumbered; ordinal numbering starts with 2nd member.
In some lineages (e.g., Moktsa), there are more than one unnumbered members at the beginning of the lineage.

Incarnation 3 is missing because no information is known about the person. Another approach would be to create an incarnation without a person, but this creates data entry problems.
